Bay Area, CA · 415-305-3354 · [angelozorn2017@gmail.com](mailto:angelozorn2017@gmail.com) · [github.com/angelozorn](https://github.com/angelozorn) · [edova.ai](https://edova.ai)

Senior business analyst with four years turning enterprise insurance and marketing data into reporting the whole enterprise runs on. Founder of an AI products company – three production SaaS applications built by directing AI coding agents. Advanced SQL and Python; automates recurring work wherever it exists, from data pulls to auditing to ad-hoc reporting.

## PROFESSIONAL EXPERIENCE

### AAA Mountain West Group

**Senior Business Analyst** October 2025 – Present

- Wrote the SQL that builds the insurance transaction fact table (20 source tables, tens of millions of rows), now used in analyst Tableau dashboards company-wide and by principal financial analysts for official monthly premium and revenue KPI reporting.
- Built an AI agent that automates answers to business partners' ad-hoc insurance data questions, writing the SQL semantic layer it queries, and cut turnaround from between 4 hours and one business day to under 5 minutes.
- Developed Python forecasting models for the company's two largest products (California Auto and Homeowners) that provided the baseline for the official 2026 enterprise sales forecast tracking within 1% of actuals every month so far.
- Automated policy auditing in SQL: a real-time pipeline joins 35 tables to screen all new P&C business (~250 policies flagged monthly) against 8 audit rules, feeding a Tableau dashboard reviewed by 40+ stakeholders up to the executive team.

**Database Marketing Analyst** July 2023 – October 2025

- Owned the internal data behind the company's vendor-built Marketing Mix Model: automated the recurring quarterly pull with Python and embedded SQL, hand-pulled only the new data as executives' questions for the model evolved, and fielded all vendor data questions.
- Produced 700+ campaign lists generating 150,000+ leads for retail and call center agents.
- Built attribution logic connecting new memberships to their source campaigns across direct mail, email, OBC, and paid digital.
- Automated lead-creation workflows using Python and embedded SQL, eliminating manual list-pull effort.

**Product Marketing Analyst** July 2022 – July 2023

### FOUNDER — EDOVA ([edova.ai](https://edova.ai))

AI products and education company I run solo by directing AI coding agents. *Three software products, an 18-course academy, and an automated lead pipeline, all live in production.* 2026 – Present

- Took three SaaS data products from idea to production by directing AI coding agents: Sentinel (finds risky access permissions in a company's cloud), Meld (matches duplicate customer records into one golden record), and Vigil (catches data quality problems in a warehouse before the business does).
- Manage the cloud infrastructure myself: Google Cloud projects, IAM roles, and service accounts; BigQuery access; Cloudflare DNS and email routing; deployments on Vercel and Railway.
- Set the safety rules for the products and the outreach pipeline: data connectors are read-only, marketing compliance is enforced in code, and no message goes out without human approval. Applied to a lead pipeline that graded 3,000+ businesses.
- Directed AI agents in authoring an 18-course, 400+ lesson applied-AI curriculum covering prompt engineering, agentic systems, and AI governance, with each course tested by AI review panels before release.

## SELECTED TECHNICAL PROJECTS [github.com/angelozorn](https://github.com/angelozorn)

- Sports analytics (Python) — rest-vs-rust for NFL playoff bye teams; interactive MLB “scissor move” analysis.
- Machine learning models (Python, TensorFlow, Keras, scikit-learn) — NBA MVP prediction from prior-season statistics; music-genre classification from raw audio using librosa; binary classification for financial time-series forecasting.
- angelolisteninghistory.com — full-stack web application (Python, MySQL, JavaScript) on AWS with Spotify API integration.

## TECHNICAL SKILLS

**Data & Analytics** · SQL (advanced), Python (pandas, scikit-learn, TensorFlow, PyTorch), R, statistical modeling, forecasting, A/B and attribution analysis, Tableau, Excel

**Data Engineering** · Dimensional modeling, ETL/ELT pipelines, data quality monitoring, entity resolution, BigQuery

**Applied AI** · LLM application development, agentic workflows with human-in-the-loop gates, prompt engineering

**Cloud & Tools** · GCP (IAM, service accounts, resource administration), Cloudflare (DNS, email routing), Vercel and Railway deployment operations, Git/GitHub, AI-directed software development (Claude Code)

## EDUCATION

**M.S., Business Analytics** · Dominican University of California, San Rafael, CA August 2022

**B.A., Mathematics (Minor: Economics)** · Occidental College, Los Angeles, CA May 2021
